

## B2 Motion on Population Control

Proposer: Joshua Alston (Leeds)

Agenda item: B Motions of Policy and Organisation (Closed 18th July)

### Summary

To add a Young Greens stance on population control advocacy within the environmental movement to the record of policy statements.

1 Motion on Population Control

2 This motion notes:

3 The richest 10% of the global population produce more than 50% of global climate  
4 emissions.[\[1\]](#)

5 Longstanding racist anxieties surrounding global population rise particularly  
6 among people of colour are particularly popular among the global far-right.[\[2\]](#)  
7 Fear of a declining white population and white replacement have been a constant  
8 justification for white supremacy since earliest colonisation, and has been  
9 embraced by far-right terrorists.[\[3\]](#)

10 Elements of the environmental movement have adopted 'populationist' explanations  
11 for climate change. This theory views climate change as primarily caused by  
12 demographic expansion among people of colour in the Global South and argues for  
13 population control as a solution for this.[\[4\]](#)

14 This motion believes:

15 Climate change cannot be adequately explained by global population rise, owing  
16 to the ongoing global inequality in carbon emission between the wealthy and the  
17 poor.

18 Blaming climate change on global population creates a false explanation for  
19 climate change which is unmoored for the global economic forces that produce  
20 climate change, and therefore constitutes a form of climate change denial.

21 Population control creates a racist narrative in which people of colour having  
22 too many children are blamed for climate change.

23 Population control reflects violent far-right ideas which views population rise  
24 among people of colour and the global south as a threat to white security. These  
25 ideas have no place in the environmental movement.

26 This motion resolves:

27 To insert into the Young Greens record of policy statements the following:

28 'The Young Greens believe that climate change results from our current fossil  
29 fuel based economic system. The need to change this urgent. Global population  
30 rise cannot adequately explain climate change. Population control advocacy  
31 creates a racist narrative where responsibility for climate change is placed on  
32 people of colour who are seen as having too many children.

33 Advocacy for population control has no place in the Green Party or the wider  
34 environmental movement.'
